

Quick Video - Project Code Generator

Title: Project Code Generator

Brief description: The Project Code can now be configured to automatically generate a project code. The new codes can be configured with several nodes including a prefix followed by a separator value followed by a sequence number.

What's covered in this video:

- Unanet property Settings to enable automatic generation
- Administrator ability to input a project code or change the project code
- Ability to import a project code or have the Unanet system generate the project code, if enabled
- Project manager view of creating or copying a project, with the project code field disabled so the automatic generation occurs
