

Credit Card Integrations - AMEX/American Express KR1025 Imports into Unanet

Unanet provides a special import capability for the Amex Credit Card file format (KR-1025). This Unanet import differs from other Unanet imports because it does not use the standard Unanet header row with the column names: Instead, the KR-1025 is a fixed format file (data is located at specific column numbers, rather than separated by commas). Unanet's Amex import capability is described here: [Help Docs: Import Credit Card - Amex](#).

The following pages provide further details about the Amex import:
